5 Protection against static electricity

The VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC in versions with electrostatically chargeable plastic parts, such as e.g. plastic housing, metal housing with inspection window, with plastic coated sensors, suspension cable or suspension hose, distance tube or connection cable with the separated version, a caution label points out the safety measures that must be taken with regard to electrostatic charges during operation.

**WARNING- DO NOT OPEN WHEN AN
EXPLOSIVE ATMOSPHERE IS PRESENT**

Caution: Plastic parts! Danger of electrostatic charging!

- Avoid friction
- No dry cleaning
- Do not mount in areas with flowing, non-conductive products

6 Use of an overvoltage arrester

If necessary, a suitable overvoltage arrester can be connected in front of the VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC.

When used as category 1G or 1/2G instrument, as far as necessary analogue, a suitable overvoltage arrester must be connected in front as protection against voltage surges according to EN 60079-14.

7 Grounding

In order to avoid the danger of electrostatic charging of the metallic parts, the VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC must be electrostatically connected to the local potential equalisation (transfer resistance $\leq 1 \text{ M}\Omega$), e.g. via the ground terminal, when used as category 1G or 1/2G

instruments.

8 Impact and friction sparks

When used as category 1G or 1/2G instruments, the VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC in aluminium/titanium versions must be mounted in such a way that sparks from impact and friction between aluminium/titanium and steel (except stainless steel, if the presence of rust particles can be excluded) cannot occur.

9 Material resistance

For applications requiring instruments of category 1G or category 1/2G the VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC must only be used in products against which the wetted materials are sufficiently resistant.

10 Mounting with external display unit VEGADIS 61/81

The intrinsically safe signal circuit between VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC and the external indicating unit VEGADIS 61/81 should be set up without grounding. The required insulation voltage is > 500 V AC. When using the VEGA connection cable included with the delivery, this requirement is fulfilled. If grounding of the cable screen is required, it must be carried out according to EN 60079-14.

11 Installation/construction

The VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC have to be mounted such that the sensor is effectively secured against touching the vessel wall, under consideration of other vessel installations and flow conditions in the vessel. This applies especially to suspension pressure transmitters and versions with distance tube lengths over 3 m.

12 Installation of the VEGABAR series 80 with separate housing

With the version with separate housing of the pressure transmitter VEGABAR B8*.AC/U/O/H/T, VEGABAR B8*.VC, the potential equalization must be provided in the complete range of the connection cable between electronics housing and transmitter housing.
