VARIMETER
Voltage relay
MK 9064N, MH 9064

0269462

Product Description

The voltage relays MK 9064N and MH 9064 of the varimeter family provide a solution for an optimised monitoring of the function of an electrical device. Single-phase AC and also DC can be measured, undervoltage, overvoltage and voltage window are monitored and the measured value is displayed on the front.

MH 9064.12

Your Advantages

- Preventive maintenance
- For better productivity
- Quicker fault locating
- Precise and reliable
- Min-, Max. value or window monitoring
- Measuring range up to AC/DC 600 V
- Large measuring ranges
- Simple configuration and fault diagnostic
- Auxiliary voltage ranges DC 24 V, AC 230 V, AC/DC 24 ... 230V or AC/DC 110 ... 400 V

Features

- According to IEC/EN 60 255-1
- AC/DC voltage measuring (single-phase)
- Start up delay, on delay
- Manual reset
- LCD for indication of the measuring values
- Relay output
  MK 9064N: 1 changeover contact
  MH 9064: 2 x 1 changeover contacts
- Relay function selectable (energized/de-energized on trip)
- As option with plugable terminal blocks for easy exchange of devices
  - with screw terminals
  - or with cage clamp terminals
- Width MK 9064N: 22.5 mm
- Width MH 9064: 45.0 mm

More Information

- **MH 9064**
  The MH 9064 has 2 relay outputs.
  The voltage monitoring can be assigned ro relay 1 and /or relay 2

Approvals and Markings

CE

Applications

- Voltage monitoring AC/DC single-phase
- Voltage dependent switching at under- or overvoltage

Connection Terminals

Terminal designation	Signal description
A1(+), A2	Auxiliary voltage AC or DC
e, f	Voltage measuring input AC, DC
11,12,14	Indicator relay (C/O contact)
21, 22, 24	Indicator relay (C/O contact)

Function

The Device is programmable for AC- or DC- measuring.
On AC-measurement the rectified mean value is measured.
On sinusoidal input signals the RMS value is displayed.

After connecting the auxiliary supply to terminals A1-A2 the startup delay disables the monitoring function so that changes on the input have no influence on the relay output of the VARIMETER.
The device is in display (RUN) mode and continuously measures the actual values. Pressing (Esc) for more than 3 sec starts the input mode.

If the setting value is exceeded the relay switches and the display indicates this state. The display is inverted, flashes and shows the error.

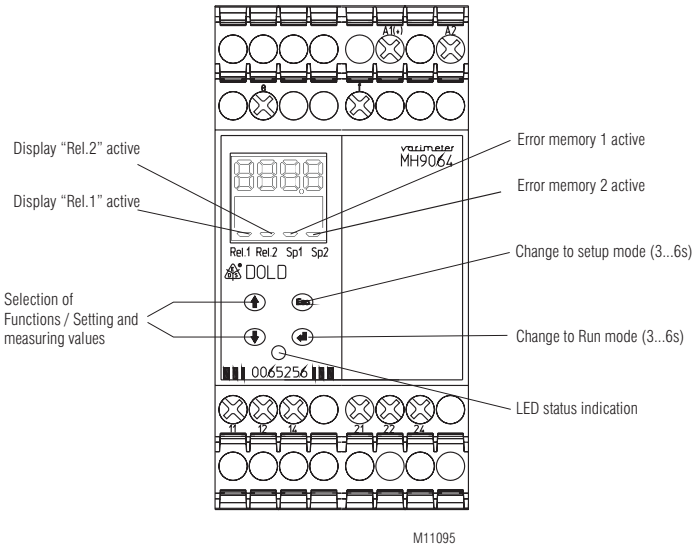
The fault memory is selectable
With button (↵) the fault memory can be deleted.

On the unit MH 9064it is possible to assign different functions to the different relays so one can be used as pre-warning and the other as alarm output. Relay output 1 switches when actual value exceeds the pre-warning setting. If a second setting assigned to relay output 2 the unit gives an Alarm signal.

Functional Notes

The unit needs a connected auxiliary supply.
It is designed for single phase AC/DC measurement.

Setting



Indicators

The LED indicate the state.

green:	on, when auxiliary voltage present
orange (flashes):	No measurement; unit in input mode
red (short On, short Off):	Failure overvoltage

If the measured value is higher then the upper end of scale value, the display shows the fault message "OL"

Setting Parameter

< U Fault, when value drops under set point
> U Fault, when value exceeds set point
OFF Measurement disabled

If the adjusted threshold of at least one measuring function is exceeded, the corresponding relay output switches after the selected time delay tv and the fault is indicated on the display.

Manual reset can be activated or de-activated and is operated with ENTER on the unit.

Adjustable Parameter

Limit values for Rel.1 and Rel.2 Selectable with buttons UP DOWN.		Factory setting
<U:	Response value undervoltage (Undervoltage relay)	OFF
>U:	Response value overvoltage,, (Overvoltage relay)	*
Hyst:	response value hysteresis	5 %
t_v:	On delay for relays (0 ... 10 sec)	0 s
A / R:	Seting open- / closed circuit operation	R
Sp:	Error storage (ON / OFF)	OFF

Response values can be deactivated. (OFF)

*) dependent to device-variant (measuring range)

Further Setting Parameter

Selectable with buttons UP DOWN.		Factory setting
t_a:	Start up delay, when auxiliary voltage connected (0.2 ... 10 s)	0.2 s
AC/DC	Measuring voltage AC or DC	AC

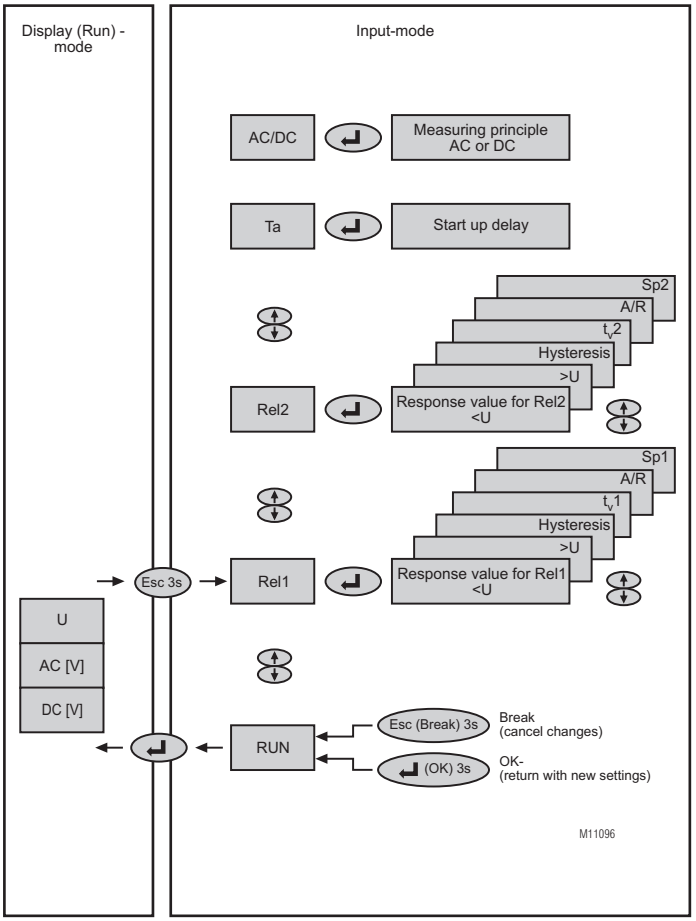
Restore Factory Settings

(Restore factory settings)
Before auxiliary voltage connected press button Esc .
During start press and hold.

Indicator output

The switching mode energized or de-energized on trip can be set in input mode. The MH 9064 has 2 relay outputs. Monitoring function can be assigned to Relay 1 and/or to Relay 2.

Operating



After connecting the auxiliary supply A1/A2 the unit is in display (Run) mode**:**

The actual measured value is displayed continuously (AC or DC)
The display is inverted when a measured value is exceeds the settings..

With button ↵ the fault memory is reset.

Pressing button Esc for more than 3 sec the unit changes to input mode.

In input mode the measurement is disabled, the relays are in failure mode and the indicator LED is orange.

With the buttons ↑ ↓ the different setting values can be chosen.

Move cursor position

↵ One character to the right

Esc One character to the left

Back to the Display (Run)-Mode

Press button ↵ 3 s OK New values stored

or

Press button Esc 3 s; Break Values unchanged

RUN on the display confirm with ↵ to change to display (Run) mode.

Display (Run) - Modus	Input-Mode
Display inverted when the actual value is in failure state.	Measurement interrupted, relays are in failure state, indicator LED orange color

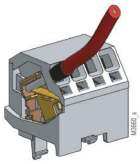
Screw terminal (PS/plugin screw)

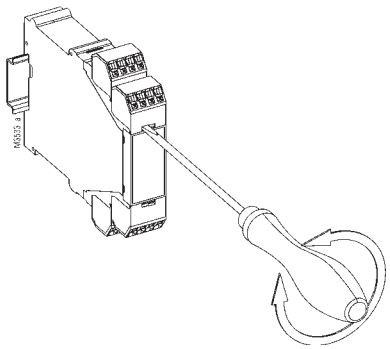


Cage clamp terminal (PC/plugin cage clamp)

Notes

Removing the terminal blocks with cage clamp terminals

1. The unit has to be disconnected.
2. Insert a screwdriver in the side recess of the front plate.
3. Turn the screwdriver to the right and left.
4. Please note that the terminal blocks have to be mounted on the belonging plug in terminations.



Set Up Procedure

The connection has to be made according to the connection example.

Safety Notes

Dangerous voltage.
Electric shock will result in death or serious injury.

Disconnect all power supplies before servicing equipment.

- Faults must only be removed when the relay is disconnected
- The user has to make sure that the device and corresponding components are installed and wired according to the local rules and law (TUEV, VDE, Health and safety).
- Settings must only be changed by trained staff taking into account the safety regulations. Installation work must only be done when power is disconnected.
- Observe proper grounding of all components
