## Operation and system construction

**Measurement principle** Electronic measurement and conversion of input signals in industrial temperature measurement.

**Measurement system** The iTEMP® PCP DIN rail TMT 121 temperature transmitter is a 2-wire transmitter with an analogue output. It has measurement input for resistance thermometers (RTD) in 2-, 3- or 4-wire connection, thermocouples and voltage transmitters. The TMT 121 is set up using the TMT 180A, TMT 181A or TMT 121A configuration kit.

## Input

**Measured variable** Temperature (temperature linear), resistance and voltage.

**Measuring range** Dependent on the sensor connection and input signal the transmitter evaluates a number of different measurement ranges.
