VC series resistant to ammonia

#### **Technical data**

Ηι	ım	ın	ItV

Measuring range	0100% rh
Accuracy (MR 2090% rh at 1540°C	;)±3% rh
Accuracy <20 and > 90 % rh	±5% rh
at <15°C, >40°C	
Response time (at calm air)	<20 s

#### Tomporotura

remperature	
Measuring element (DIN EN 60751)	) Pt 100 class B
Measuring range	30+70°C
Accuracy	
Output: 01V (-2770°C)	±0.2 K
010V (-2970°C)	±0.2 K
420mA (PC)	±0.3 K
at <10°C, >40°C	±0.007K/K additional

#### Other data

Otner data	
Ambient temperature	40+80°C
Degree of protection Sensor/Elektronic	IP 30/IP 65
Operating voltage:	
I-output	. 1230V DC
U-output (010V)	1530 V DC
U-output (01V)	630V DC
Load resistance (010V, 01V)	
Load (curret-output) ad	cc. diagramm
Power consumption	
010V, 2 x 01V	< 5 mA
01V	<1 mA
Minimum air speed	
Output: 2 x 420mA	≥1.5 m/s
420 mA, 2 x 010 V	≥1 m/s
010V, 2 x 01V	≥0.5 m/s
Self-heating Pt 100 (1 m/s, 2mA, 20°C)	0.1 K
Material hig	h-grade steel
Electromagnetic compatibility	
Emitted interference El	N 55011 cl. B
Noise immunity	EN 50082-2

"subject to technical modifications"

#### Product info sheet no. C 4.4 **Humidity/-temperature sensors**

special sensors for use in gases containing "ammonia"

#### Description

MELA-Humidity/-temperature sensors in the VCx/11 series are compact sensors in a rod-type design. They are available with a 1.5 m connecting cable for measuring the relative humidity or the relative humidity and the temperature in air and other gases. The sensor can be used in areas contaminated with a variety of pollutants (e.g. ammonia), without damaging the element or falsifying its measuring value. However the sensor is not resistant to all harmful substances, you are recommended to contact the manufacturer in special cases.

All the sensors in the series are equipped with ZE 26type membrane filters. For special applications other filters can be used as well (product info sheet no. F 5.1).

Use of capacitive **MELA-humidity sensor elements** is a guarantee of:

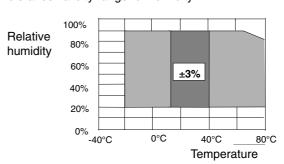

- high long-term stability
- almost linear characteristic curve
- good dynamic performance
- resistance to dew formation
- small hysteresis.

#### Type version

measured variable	output	series VC with cable
	01V	FVC 1/11
F	010V	FVC 2/11
rel. humidity	420mA	FVC 3/11
С	01V Pt100	CVC 1/11
r.h. + Pt100	010V Pt100	CVC 2/11
1.11. + 11100	420mA Pt100	CVC 3/11
K r.h. + temp.	2 x 01V	KVC 1/11
	2 x 010 V	KVC 2/11
	2 x 420mA	KVC 3/11

special versions available on request

Tolerance validity range for humidity

Install the *MELA-humidity/-temperature sensors* at a place in the room, plant or equipment where characteristic levels of humidity occur. Mounting close to heathers, windows, or outside walls should be avoided.

The specified minimum air speed and - with current output - the load according to the operating voltage (diagram) should be complied with in the case of the VC series. Deviations may lead to additional measuring faults resulting of the self-heating of the sensor (clocked operation will help to avoid this).

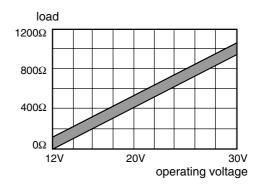

Install the sensor horizontally or with the sensor element pointing downwards. Avoid water ingress. Dew formation and splashes do not damage the sensor, although corrupted measurement readings are recorded until all the moisture on and directly around the sensor element has dried up.

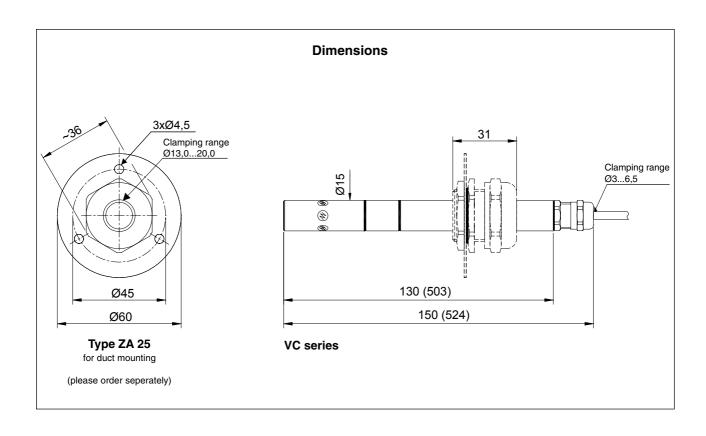

Dust does not cause any harm to the humidity sensor, however, it does affect dynamic performance. We advise you to use a **ZE13-type sintered filter** at high air speeds (≥8m/s). As additional protection against rainfall and sunlight we recommend that you use the **ZA 161/1-type** water quard (product info sheet F 5.1).

Do not touch the highly sensitive sensor element. For mounting supports we recommend a *console type 20.009* and an *attachment plate type ZA 25* (Product info sheet No. F5.1). In order to check functioning in the place of installation, we recommend that you use the *ZE 31/1-type MELA-humidity standard* (product info sheet no. F 5.2).

Please consult the *application instructions for the sensing elements* (product info sheet no. A 1) or check with the manufacturer for further information which you need to bear in mind when using humidity sensors with capacitive sensing elements.
