

#### Main

Main	
Commercial Status	Commercialised
Range of product	Phaseo
Product or component type	Power supply
Power supply type	Regulated switch mode
Input voltage	200500 V AC phase to phase, terminal(s): L1-L2 100120 V AC single phase, terminal(s): N-L1
Output voltage	24 V DC
Rated power in W	120 W
PFC filter	With PFC filter conforming to IEC 61000-3-2
Power supply output current	5 A
Output protection type	Thermal, protection technology: automatic reset Against undervoltage, protection technology: tripping if U < 21.6 V Against short-circuits, protection technology: manual or automatic reset Against overvoltage, protection technology: 3032 V, manual reset Against overload, protection technology: manual or automatic reset

#### Regulated Switch Mode Power Supplies

#### Derating

The ambient temperature is a determining factor that limits the power an electronic power supply can deliver continuously. If the temperature around the electronic components is too high, their life will be significantly reduced.

The nominal ambient temperature for the Universal range of Phaseo power supplies is 50°C. Above this temperature, derating is necessary up to a maximum temperature of 60°C.

The graph below shows the power (in relation to the nominal power) that the power supply can deliver continuously, depending on the ambient temperature.

#### X Maximum operating temperature (°C)

ABL 8RPM, ABL 8RPS, ABL 8WPS mounted vertically

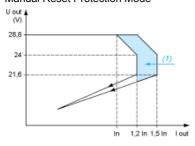

Derating should be considered in extreme operating conditions:

- Intensive operation (output current permanently close to the nominal current, combined with a high ambient temperature)
- Output voltage set above 24 Vdc (to compensate for line voltage drops, for example)
- Parallel connection to increase the total power
