

Commissioning

The braking resistors are designed to operate on a 5% duty cycle. For inverter frame size D, set P1237 = 1 to enable the braking resistor function. For other frame sizes, use the dynamic braking module to select the 5% duty cycle.

Note

Additional PE terminal

Some resistors have an additional PE connection available on the resistor housing.

B.1.6 Line reactor

<p> WARNING</p> <p>Heat during operation</p> <p>The line reactors get hot during operation. Do not touch. Provide adequate clearance and ventilation.</p> <p>When operating the larger line reactors in an environment with a surrounding air temperature in excess of 40° C, the wiring of the terminal connections must be accomplished using 75° C copper wire only.</p>
<p> WARNING</p> <p>Risk of equipment damage and electric shocks</p> <p>Some of the line reactors in the table below have pin crimps for the connection to the inverter's mains terminals.</p> <p>Use of these pin crimps can cause damage to the equipment and even electric shocks.</p> <p>For safety reasons, replace the pin crimps using UL/cUL-certified fork crimps or stranded cables.</p>
<p> CAUTION</p> <p>Protection rating</p> <p>The line reactors have a protection rating of IP20 in accordance with EN 60529 and are designed to be mounted inside a cabinet.</p>

Functionality

The line reactors are used to smooth voltage peaks or to bridge commutating dips. They also can reduce the effects of harmonics on the inverter and the line supply.

The larger line reactors for the 230 V variants of inverters have side mounting brackets to allow side-by-side mounting (see diagram below).

B.1.7 Output reactor

 CAUTION
<p>Pulse frequency restriction</p> <p>The output reactor works only at 4kHz switching frequency. Before the output reactor is used, parameters P1800 and P0290 must be modified as follows: P1800 = 4 and P0290 = 0 or 1.</p>

Functionality

The output reactors reduce the voltage stress on the motor windings. At the same time, the capacitive charging / discharging currents, which place an additional load on the inverter output when long motor cables are used, are reduced.

Make sure you use a shielded cable (maximum length: 100 m) to connect the output reactor.
